Platelet Concentrate for no Transfusion purposes (CPunT)

The CPunT Preparation System is a closed system medical device to obtain autologous concentrated platelet-rich plasma from the blood, used in regenerative medicine

The medical device developed in Eltek Group is composed by:

- an electromedical device which performs the function of standardizing the separation of the PRP component from the other parts of the blood
- a single-use kit to treat anticoagulated whole blood

Advantages:

- closed system that avoids the risk of microbial contamination
- standardization of the process: the device helps operator simplifying all steps
- increased efficiency of the production system
 - easy to use device
 - > 4X concentration

SAFE - STANDARD - CLEAN
